

Laravel Mid-Level Assessment

Task:

Build an **Inventory Management System** using Laravel.

Requirements

1. Implement authentication. Only authenticated users can access the application.

2. Create the following modules:

Products

- Name
- SKU
- Price
- Stock Quantity
- Status (Active/Inactive)

Categories

- Name
- Description

3. Create CRUD operations for Products and Categories.

4. Implement a one-to-many relationship:

- One Category has many Products.
- One Product belongs to one Category.

5. Apply server-side validation for all forms.

6. Display a dashboard containing:

- Total Products
- Total Categories
- Low Stock Products (Stock less than 10)

7. Add search functionality for Products by Name or SKU.

8. Implement pagination with 10 records per page.

9. Prevent duplicate SKU values.

10. Create a Product Details page displaying all related information.
